Bodyshape Landing Page Project Description

1. Short Description

The 'Bodyshape' project is a responsive landing page website developed strictly following the provided Figma design. The website is styled using Tailwind CSS to ensure pixel-perfect layout, spacing, and typography. Font Awesome icons are integrated as per the design, and the codebase is maintained with GitHub version control, ensuring at least 5 meaningful commits throughout development.

2. Technologies Used

- HTML5 – for website structure

- Tailwind CSS – for styling and responsiveness

- Font Awesome – for icons

- Git & GitHub – for version control and code management

3. Challenges Faced

-Initially, I had difficulty designing the header section and making it responsive.

- Ensuring mobile-first responsive design required extra practice.
